Item Control (Inventory)

SO Customer Parts 45797	<p>A new CID Setup Option, SONOADDCPART, has been developed that will restrict users from creating new customer part number records directly from the Sales Order screen. This new setup option works with existing security controls to only allow users that can create new customer part records in the Item Master C/V Parts tab to save new customer part overrides to that screen.</p> <p>If a user has access to Item Master Add token and the Item Master Edit C/V Parts token, they will be allowed to create new customer part records in the Item Master directly from the Sales Order screen, even when the new SONOADDCPART option is enabled.</p> <p>If a user does not have access to the Item Master Add token or the Edit C/V Parts token, the customer part data in the Sales Order screen acts as a search field only and any entries saved in the Sales Order customer part field will not be saved back to the Item Master, effectively preventing those users from creating customer part overrides in the Item Master.</p> <p>Setup Options**: SONOADDCPART</p>
----------------------------	--

Order Entry

Oversell Prevention 45740	<p>A new Item Attribute called NOOVERSELL has been developed . When applied to an item, this attribute will prevent the item from being added to a sales order or converted from a quote if doing so would result in negative on hand availability.</p> <p>When an item has the NOOVERSELL attribute assigned and adding the line item to a Sales Order with an order quantity that would drive the item's on hand below zero, the user will get a message 'Item Cannot be Oversold' and will be prevented from adding the item unless the order quantity is reduced to match the available on hand.</p> <p>On a quote record, if a NOOVERSELL item has zero on hand when the item is added, the user will be prevented from adding the item with the same message.</p> <p>During the conversion of a quote record to a SO, if a NOOVERSELL item's current available on hand quantity is less than the quote order quantity, the convert process will be stopped with the same message.</p> <p>Setup Options**: NOOVERSELL (Item Attribute)</p> <p>Rules**: ITEMATTRIB</p>

Order Entry

Copy SO Security Token 45741	<p>A new special security token has been developed for the Sales Order screen (SALESORDER) which controls a users ability to copy sales orders.</p> <p>The new S21 security token, when checked, will disable the Copy SO button on the Sales Order screen.</p> <p>The SALESORDER token in the Security Tokens/Options screen must be edited to assign the S21 option for 'No SO Copy'.</p>
SO Lock Billto on S2P 45880	<p>A new CID Setup Option, SOLOCKBILLTOS2P, has been developed which will lock down the Sales Order BillTo field once any item on the SO has been pushed to production (S2P). A new Security Token option (S22) for the SALESORDER security token has been developed to allow certain users to override this restriction.</p> <p>The SALESORDER token in the Security Tokens/Options screen must be edited to assign the S22 option for 'Override BillTo S2P'.</p> <p>Setup Options**: SOLOCKBILLTOS2P</p>
Oversell Prevention 45964	<p>A new Item Attribute called NOOVERSELL has been developed . When applied to an item, this attribute will prevent the item from being added to a sales order or converted from a quote if doing so would result in negative on hand availability.</p> <p>This enhancement expands the functionality to process the same NOOVERSELL logic on edits to existing SO and Quote line items that would drive the item's on hand quantity below zero.</p> <p>When an item has the NOOVERSELL attribute assigned and editing the line item to a Sales Order with an order quantity that would drive the item's on hand below zero, the user will get a message 'Item Cannot be Oversold' and will be prevented from completing the change unless the order quantity is reduced to match the available on hand.</p> <p>On a quote record, if a NOOVERSELL item has zero on hand when the item is edited, the user will be prevented from saving the change with the same message.</p> <p>Setup Options**: NOOVERSELL (Item Attribute) Rules**: ITEMATTRIB</p>

Production

Program/Change ECR #	Change Description
-------------------------	--------------------

Production

Sales Order Master - S2P process 46063	A new CID Setup Option, PWONOSCH, has been developed that will create PWOs with a blank schedule date when submitted to production (S2P) from the Sales Order screen. . Setup Options**: PWONOSCH
--	---

Shipping Events (Logistics)

SELINK Assign by Lot 42656	This development allows for new functionality for customers using the SELINK feature to assign specific lot control items to SE loading procedures. A new CID Setup option, SELINKALLOC, will skip auto linking lot controlled items to the SE and allow users to link lot-controlled items by lot# in the SE Link screen. The SE Load screen, will display and allow loading according to the specific lot#. Allocated lot#s on the Sales Order record will retain allocation details, even if the SE record is shipped, to allow for any partial shipments to retain the allocated lots and be shipped on a separate SE record. Prompt 79 will limit loading lot controlled items to lot#s that have been assigned and linked to the SE record. Pre and Post Load reports have been updated to allow lotlink data to show specific lot#s added to the SE record. Setup Options**: SELINKALLOC

** Additional information for the Setup Options, Rules, and Programs areas

Setup Options:

Setup Options are system-wide controls that must be enabled/disabled in CID Maintenance. Some Setup Options will not display until the related application has been accessed. Contact your consultant for assistance with enabling/disabling Setup Options.

Rules:

Rules are added or updated in the Rule Maintenance screen. If you are not familiar with adding or updating Rule Maintenance headers or details, contact your consultant for assistance.

Programs:

Programs are system-level routines that must be updated manually by ABIS personnel. You must contact your consultant to coordinate updating the associated Program before taking advantage of the enhancement.

Program updates may require system downtime, or may be required to occur outside of business hours.

Total Number of Changes: 7
